SESCO is a diverse Software Solutions and Professional Services Company, formerly known as May-soft Inc., founded on the vision of providing our clients with a competitive edge. This is accomplished by delivering cost effective IT solutions, which are tailored to their strategic business considerations. Our aim is to develop strong, ongoing relationships with our clients and long-term partnerships, based on mutual growth and respect with industry vendors.

Sesco is managed by a group of professionals with expertise in the field of Print Production Systems and software development. Our focus is in the areas of Unix/Linux/Windows system administration and network management, productivity solutions based on web and client/server technology and platform integration via TCP/IP, PERL, Apache and Mysql. We are certified partner with and member of Source Forge and are among a very few that provide Linux solutions.

Our people have been involved in the open systems, Internet and Linux/Open Source market segments for much of their duration. We have diverse experience in the administration, development, integration and support of a wide variety of vendors' platforms. As part of our commitment to furthering the role of open systems, we are vendor neutral, and thus in the ideal position to evaluate the various technical and business advantages/disadvantages for your organization in following a particular IT path.

Our core expertise in **LINUX/PERL** and **PRINT PRODUCTION SYSTEMS** has taken us on a path of accolades on a wide spectrum of organizations from corporate bodies like Match Group, UK to Saehan InfoTech, South Korea to CompuSolve, USA to TeleAds.

OUR SERVICES

We deliver, based on our customers requirement, all or any combination of the full life cycle services for their project including – Planning, Development, Deployment and Maintenance. These can be carried either onsite or offshore or combination of both.

We are working our way forward to build partnerships with other software and application vendors. We are also building our own “Service Assets” that can be deployed by our Customers. We are equipped with latest technology, facilities and resources, distributed across USA, UK and INDIA giving us a global edge and will help you achieve your business objectives on time and within budget by delivering IT solutions based on the following vital cornerstones:

- Fixed price/fixed time implementation of projects to ensure that projects are executed within the allocated timeframes and budgets
- Maintenance and enhancement of existing applications using an optimal mix of on site and offshore resources to keep the costs low
- Testing services to ensure that low budgets and resource constraints do not prevent technology departments from rigorous testing before rolling out applications
- Distributed delivery model, whereby we virtually extend an IT team by setting up a dedicated offshore team. As we ensure that some of our resources work at our Customer sites, they assume the responsibility of managing the offshore team.
- Strategic staffing
